

Project Brief Micon.rw Website Revival & Setup

1. Project Overview & Objective

The client previously started a [Wix website](#) which was left unfinished. They are now reviving the project and want to build a **clean, modern, highly professional company website from scratch** (moving away from Wix). The goal is a straightforward, polished corporate site that showcases their services, features a background or embedded video, displays client logos, and drives contact inquiries.

No complex functionalities (like e-commerce or user portals) are required.

2. Technical & Infrastructure Requirements

- **Domain Management:**
 - Purchase a new **.rw** domain (e.g., [micon.rw](#) via Afri-Register or an authorized registrar). Which we can still purchase
 - Secure a **2-year registration period**.
- **Hosting:** Set up reliable web hosting suited for a modern, fast-loading corporate site.
- **Business Emails:**
 - Provision and configure corporate emails via **Microsoft 365 / Exchange** (e.g., [info@micon.rw](#)).
 - Point the domain's MX records to Microsoft.
- **Social Media:** Create placeholders/links for future social media channels (hyperlinks to be updated once socials are live).

3. Website Structure & Core Features

The website needs to be a "general company website" emphasizing presentation and ease of contact.

- **Hero Section:** Must feature a video playing directly *in/on* the website (either as a high-quality background video loop or a prominent, polished embedded video player).
- **Services Section:** A clean grid or layout detailing the company's core offerings.
- **Social Proof / Portfolio:** A "Clients We've Worked With" section showcasing past client logos or brief case studies.
- **Contact & Lead Generation:** High-visibility "Get in Touch" calls-to-action (CTAs) and an easy-to-use contact form linked to the new corporate email.
- **Footer:** Standard corporate footer containing navigation links, copyright, contact info, and hyperlinks to social media icons.
